

Process Description:

The process begins with **Start Ticket**. Once this is completed, two separate paths start simultaneously:

1. Path A:

- The activities **Update Docs** and **Draft Release Notes** begin in parallel.
- Both must finish before moving forward.

2. Path B:

- Here, an exclusive choice must be made:
 - **Option 1:**
 - The activities **Implement Code Change** and **Write Unit Test** begin in parallel.
 - Both must finish before moving forward.
 - **Option 2:**
 - First, **Design New Feature** is completed.
 - Next, **Code Review** is performed.

After **both** of these conditions are met:

- **Path A** (Update Docs and Draft Release Notes) is complete,
- **Path B** (either Option 1 *or* Option 2) is complete,

the activity **Close Ticket** is performed.

The process then ends.

Key Points:

- **Update Docs** and **Draft Release Notes** always run in parallel and must finish.
- The choice between **Option 1** (parallel code/test) and **Option 2** (design/review) is exclusive—only one path is taken.
- **Close Ticket** starts only after all selected activities from both paths are done.
- No activities are skipped.
